Summary

Computer Science Engineering (AI & ML) student with hands-on experience in Python, machine learning, full-stack web development, and AI-powered applications. Skilled in building projects involving predictive modeling, intelligent automation, data analysis, responsive web interfaces, and real-world problem-solving. Experienced in exploring technologies such as Flask, Streamlit, React, Node.js, SQL/NoSQL databases, and AI/ML frameworks through academic projects, hackathons, and software developing

Education

SSC/HSC (2012–2022)
Holy Family High School
Jan 2012 - Jan 2022

College
Holy Family Jr College
Mar 2022 - Feb 2024

Technical Skills

Python, Unity, API Calling, UI Testing, C, C++, HTML, CSS, JavaScript, Java, SQL, React, Gadot

Soft Skills

Communication, Teamwork,

Work Experience

Jyesta Co
AI Intern
Jul 2026 - Oct 2026
Trained and work with Ai and Machine Learning models

- Built AI/ML models, developed full-stack web applications, integrated AI-powered features, worked with datasets and predictive analytics, and created demo-ready prototypes for hackathons and real-world problem-solving.

Projects

OptiAI – AI-Powered Code Enhancement Platform
Developed an AI-powered code enhancement platform using Flask and Ollama with Qwen2.5-Coder.
Jan 2023 - Jan 2023

- Explored code optimization, code-quality analysis, syntax highlighting, and browser-based code execution to demonstrate AI-assisted developer tools.

FoodBridge – Food Rescue Platform
Built a food rescue platform concept connecting donors, volunteers, NGOs, and food recipients.

- Developed web interfaces and explored food donation workflows, expiry tracking, location-based coordination, and delivery management using web technologies.

TempoSat – Satellite Frame Interpolation
Developed a prototype for satellite image frame interpolation using scientific satellite datasets.

- Explored data processing, Jupyter notebooks, and Streamlit to demonstrate potential applications in satellite imagery analysis and visualization.

Career Recommendation ML Model
Created a machine learning project to recommend suitable courses based on students' academic performance and interests.

- Experimented with classification algorithms, dataset preprocessing, model evaluation, and a Streamlit interface to demonstrate prediction results.

BedLink – Hospital Bed Matching System
Designed a healthcare coordination platform concept for matching emergency patients with suitable hospitals based on

Problem Solving, Critical Thinking, Adaptability, Quick Learning, Creative Thinking

Languages

English, Hindi, Marathi, Punjabi

Certifications

IDE Bootcamp, DevSprint, IoT Workshop / Program, Hardware Workshop / Program

bed availability, patient requirements, location, and travel time.

- Planned responsive interfaces and workflows for hospital updates, availability tracking, and ambulance dispatch coordination.
